Wiz for Education

Secure your campus with Wiz so you can focus on student success

As education institutions move to the cloud, it becomes paramount for them to protect their students, faculty, staff, and research data in order to secure their campus and accelerate research. However, they often face a lack of visibility into their cloud environment, leading to blind spots in the security posture. The cloud also introduces new attack vectors that are challenging to identify, leaving universities and schools to struggle scaling their traditional compliance and security processes in this new environment. With a typically small security teams, many universities need to manage security across thousands of accounts in their campuses, which can become very complex.

Wiz is a comprehensive cloud security platform that enables colleges, universities, and schools to effectively protect their cloud environment with visibility into their environment, effective risk prioritization, and ability to democratize security so they can scale security across their university and accelerate student success.

Gain 100% visibility

Connect to Wiz in minutes and gain centralized visibility into your cloud resources across all your accounts, all without agents.. View inventory across virtual machines, containers, serverless, Al services, and technologies running in your environment.

Remediate risks in the cloud

Detect critical risk with continuous risk assessment across vulnerabilities, identities, network exposures, misconfigurations, secrets, and malware. with a single queue of prioritized risks and context on the Wiz Security Graph.

Automate compliance assessment

Remove manual compliance with continuous monitoring against 150+ built in compliance frameworks including NIST SP 800-53, HIPAA, and others. Quickly understand compliance posture across your organization and generate reports for your leadership and auditors.

A unified cloud security platform providing universities and schools with effective risk reduction and readiness in the cloud

Comprehensive security to support education missions

- **Easy deployment:** Wiz provides an agentless approach to cloud security that allows universities to connect to Wiz in minutes and quickly view an inventory of every resource the cloud environment and its risks.
- Accurate risk prioritization: Wiz correlates risks across vulnerabilities, misconfigurations, identities, secrets, data, and malware on the Wiz Security Graph to immediately uncover critical attack paths, so you can proactively remove critical risk to harden your environment.
- **Simplified security**: Wiz projects allow you to provide teams in your university with direct access to Wiz so they can own the security of their projects. The Wiz Security graph makes it easy for non-security experts to understand risk, with guided remediation so they can quickly address risk.

Drive research with security as job zero

- Move to the cloud securely: Accelerate your cloud migration with visibility, risk reduction, and continuous compliance assessment. Build a secure foundation for your agency from the start.
- Accelerate Al Innovation: Wiz Al Security Posture Management (AI–SPM) empowers your school to confidently adopt Al by gaining deep visibility into your Al pipelines and risks to effectively secure it.
- Ensure readiness against the next Log4j: Stay ahead of threats like the Log4j or MOVEit vulnerabilities and eliminate potential downtime with Wiz's agentless vulnerability scanning. Identify exposures to emerging vulnerabilities in the Threat Research Center.
- Build bridges across departments and schools: Remove operational silos between cybersecurity, compliance, research, developement, and across different schools with Role Based Access Control (RBAC) and easy-to understand graph visualization of risks.

"

With our previous solution, if people didn't install the agent, their resources would be completely off our radar, which meant potential risks could be easily missed. Because Wiz is agentless, we don't have to worry about anyone forgetting to install software—we have visibility into everything we need.

Director of Cloud Security, Private Research University

There was no technology in the industry that could provide the level of detail that Wiz does. It's not just the users getting information in a list of vulnerabilities in the system; Wiz provides that context as well as the prioritization of those vulnerabilities. Now I can see the big picture and the vulnerabilities and threats in one centralized system.

Michael Johnson, Managing Director, Public Sector, SBS

Wiz transforms cloud security for customers – including 40% of the Fortune 100 – by enabling a new operating model. Our CNAPP empowers security and development teams to build fast and securely by providing visibility into their cloud environments. With Wiz, organizations can prioritize risk and stay agile.
